I. General description of our application

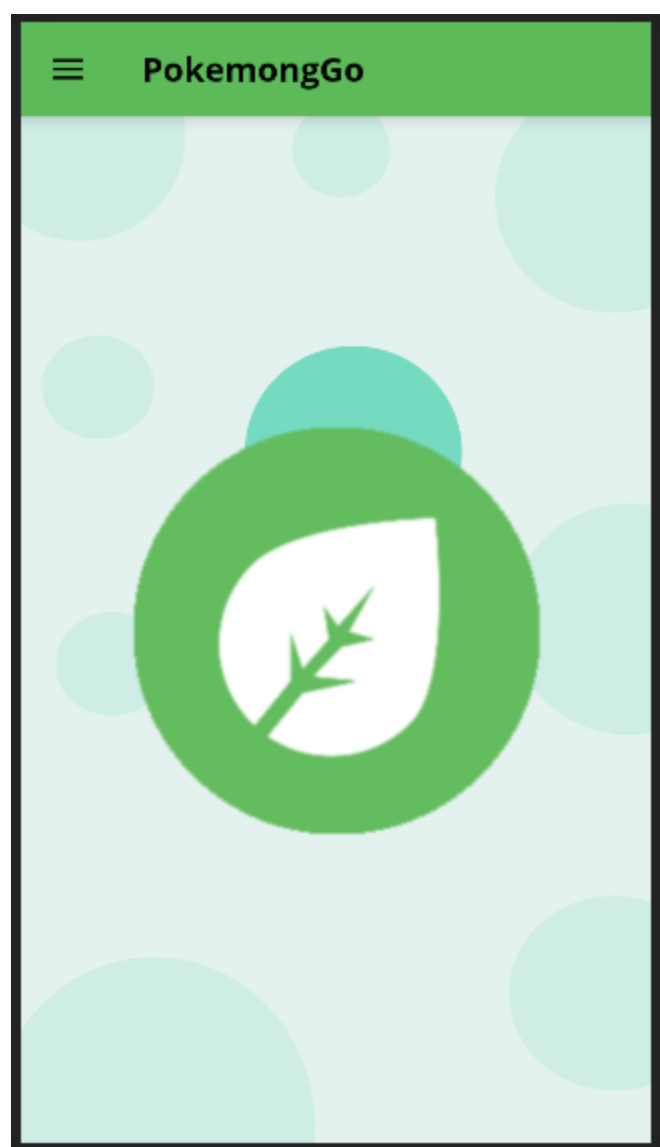

Our application, "PokemongGo," serves as a Pokémon codex exclusively dedicated to plant types. The name itself is catchy and cleverly combines the popular Pokémon theme with a touch of the Philippines through "Monggo," a local vegetable bean.

II. List of features

1. Collectable Codex: Discover and collect a wide range of plant-type Pokémon.
2. Search Bar: Easily find specific Pokémon with a user-friendly search function.
3. Expanding Pokédex: Regular updates in the future with new plant-type Pokémon additions.
4. Descriptions: Engaging insights into each creature's behavior and abilities.

III. Screenshots of the application

When you click the logo, it will bring you to the list of Pokémons.

ID: 1

Name: Chikorita

Description: Chikorita is such an adorable little Pokémon! Its a Grass-type and has this cute leafy headgear. Chikorita is known to be gentle and a bit shy. You know whats cool about it? It can use that leaf on its head to check the health of nearby plants. How thoughtful!
